## VI. Summary

(1)

An interesting story motivates / inspires us to read continuously, for it reflects our real lives. Ignoring the unreal factors, we usually feel empathy with the characters and think a lot about the words and structures related to the story. People all over the world have employed / used storytelling to obtain knowledge and make children's language learning meaningful and impressive. (60 words)

(2)

Gene therapy, which prevents or cures disease by inserting healthy genes into defective cells rather than by means of surgery or medicine, is changing the treatment of disease revolutionarily. Though in the initial phases, gene therapy has been successful in treating both children and older patients with genetic disease. However, more research is called for to ensure its security. (59 words)

(3)

Music therapy is a useful way to treat illness. Because our brain can be stimulated by responding to music, different kinds of music have different effects. The principle of music therapy is to increase the release of endorphins to produce effects to help treatment. Although music therapy is not used widely, it is regarded as an effective additional to treatment. (60 words)

(4)

The best strategy to achieve good results in the exam is to study books early. According to experts, time management and self-testing in advance will also do you good. Furthermore, habitual psychological hint is helpful, too. Meanwhile, other factors such as necessary preparations, good sleep, nutritious diet and self-confidence can pay off your efforts as well. (56 words)

(5)

Social networking sites benefit people in several different ways. Not only do they allow people to keep in close touch with friends old or new, but they provide potential job opportunities and encourage online business promotion plus interaction. Moreover, they facilitate the organization of various events, connecting people with similar hobbies or preferences globally. (54 words)
